

Auto Pool Reel®

OPERATION

JUST PUSH THE BUTTON. PUTS YOUR COVER ONTO THE WATER ALL BY ITSELF. PUSH THE BUTTON AGAIN. ROLLS UP YOUR COVER ONTO THE ROLLER ALL BY ITSELF.

FEATURES

CAN ACCOMMODATE ANY POOL COVER

The patented Auto Pool Reel system comes with tractor feed strips allowing for the installation of almost any blanket or pool cover onto the reel. Once the blanket is sized for the pool the strips are easily installed, then the cover is attached to the roller system.

AUTOMATIC DEPLOYMENT SYSTEM

No more manual pushing and pulling on a pool cover. Just push the button.

NO TRACKS REQUIRED

The Auto Pool Reel patented design deploys the cover on the water in constant alignment by using edge guides in the deployment system. They ensure smooth and repeatable rolling of the cover on and off the reel and years of hassle free service life.

ELECTRICALLY DRIVEN

With a simple push of the button the Auto Pool Reel will automatically cover or uncover the pool. Low voltage motors automatically wind and unwind the pool cover on the main reel, replacing the manual cranking of older systems. All electrical components are encased in protective housings.

SAFETY KEY

Added safety is ensured with the use of a safety key to power up the system. The electric Auto Pool Reel will not power up without it.

EDGE GUIDE ARMS

The Edge Guide Arms allow the main reel to sit back from the pool edge as required to account for any contour of the coping.

EASY ASSEMBLY

The Main Reel is made up of telescoping aluminum tubes that adjust to fit the pool width. These tubes are simply attached to the End Supports and ready for connecting the pool Cover with the tractor feed strips attached to the edges.

SECURE INSTALLATION

It is recommended that the Auto Pool Reel system is secured to the pool deck to ensure smooth operation and safety under all conditions. The End Support Rubber Mounts can be easily secured to the pool deck for areas that experience high winds.

ADDITIONAL ADVANTAGES

- Allows for continued, repeated use, with ease
- Contributes to pool yard aesthetics
- Use your existing pool cover
- Trackless system allows free and clear coping areas around pool deck
- Reduces cleaning time by keeping dirt and debris out of the pool.

Our products are designed to the highest engineering standards for all climatic conditions resulting in the highest quality systems in the industry. Each system is engineered to ensure safety and ease of use in a graceful and elegant system. Only the highest quality materials are used to ensure reliability, durability and extended service life.
